I highly recommend the products and services of Tony Hernandez and his great IT firm, BNB Technology. They set up our server, email system, dental software, dental hardware, and our disaster recovery backup system Datto.

Their knowledge and attention to detail made choosing BNB Technology as our IT solutions firm a clear and obvious choice. Tony's team made excellent recommendations as to the hardware and software requirements to fit our business needs with custom proposals. We feel their prices are fair and their service excels that of their competition.

The engineers and technicians are patient and professional in resolving any IT problems or concerns that arise. They are quick to respond to any technical issues and most issues are resolved within the hour. Their ability to remote into our computer network and resolve any problems with very little downtime is unparalleled. In addition, they monitor our software updates and renewals and make sure we are always up to date.

Having an IT solutions firm with the insight and knowledge of BNB Technology gives us confidence that our system is always performing at maximum efficiency and security.
